Overview: This is a compilation of multiple scripts that I have created and tested, and compiled to a single script. These may be useful to anyone who is struggling with getting their handhelds to work as a handheld. The script will automatically make sure all necessary applications are installed, then run specific commands to make it ready to work with the device. It should work for any device that has been built since the release of the GEOS SDK. To obtain the latest releases of the SDK, visit the link in the credits. Download:
