The most famous single-player strategy game series of all time was just given a huge boost with the release of the 2011 3rd Edition of Gary Grigsby's War in the East. Western Front fans have been eagerly awaiting Gary Grigsby's War in the East: German Assault for more than five years! With millions of copies of the original game racking up the awards (more than all other ZPGA award-winning titles combined), the War in the East world was only going to get bigger. The new release is no less than a remake of the famous War in the East title that made Gary Grigsby's name, though it is also a whole new experience! The new rule set is designed to allow players to experience a lot of the classic War in the East gameplay without the need to crack open the manual and read all about it. The game engine has been completely rebuilt and features several enhancements that have not only been commissioned by many veteran ZPGA players but have also been added by Gary Grigsby himself. NEW FEATURES Completely new rule set: with the release of War in the East: Lost Battles, the classic ZPGA game engine has been completely rebuilt. Expanded AI allowing for more detailed and predictable gameplay. AI that has been balanced and tuned to ensure the challenging AI difficulty remains in place but keeps in line with the classic ZPGA ruleset. New advanced tactics chart that allows players to choose their own weather and time of day conditions. New extended atmospheric effects that add even more to the realism of the game. Graphics and physics have been vastly improved and the real-time strategy simulation is now fully 3D instead of the 2D sprites used in the previous rule set. Expanded scenario selection: the first scenario in the game, the one Gary Grigsby is best known for, was designed with War in the East: Lost Battles in mind. Optimized and tuned to play on both powerful gaming PCs and mobile devices Updated graphics that take advantage of the recent 3D and OpenGL graphics capabilities of modern phones and tablets. Completely new mission editor allowing players to create and store all their own scenarios in one place. New campaign editor allowing players to design and share their own campaigns with their friends. - "Lost Battles" Scenario editing: The new scenario editor allows players to create and store all their own scenarios in one place without the c9d1549cdd

Oujia: Rumours is an iPhone game that you need to get rid of the rumor, you use your psychic power that someone is watching you, using a Ouija board. There are also some white ghosts that appear, you have to clean up the small rooms. Each time you complete a room, it's unlocked another one. In the game, it will be necessary to play with the wifi connection. It's because the game doesn't have an option to connect to the internet in-game. I got this for free (the cost was $0) I highly recommend it. It's one of the best iPhone games out there I would give it 7/10 it has it's flaws but they aren't really obvious like with most iPhone games.Q: Why is ObservableCollection not null but is empty? I have the following code: Foreach (Employee employee in Employees) { foreach (DateTime date in employee.Dates) { Console.WriteLine(date.Date.ToString("dd.MM.yyyy") + ": " + employee.EmployeeName); } } The Output when the data is in the database is: 05.02.2013: Employee 1 05.02.2013: Employee 2 05.02.2013: Employee 1 05.02.2013: Employee 2 When the data is loaded from the DB to the ObservableCollection (as I want a ListView to show the data) it seems empty, no matter how much data is in there. protected void LoadData() { List EmployeeList = EmployeesRepository.GetEmployeeList(); DataListView.DataSource = EmployeeList; DataListView.DataBind(); } I read about using a BindingList but because I need a ListView to display the data, and I want to be able to sort it, and I don't want to manually add each item to the list everytime a new instance of employee is added, I made an ObservableCollection. I want to be able to use the AddRange method of the ObservableCollection to just add the data as a list into the ObservableCollection. What am I doing wrong?
